Dr. Brent Romine presents a talk on “Early Career Advice for Young Engineers”

Dr. Brent Romine, President of nou Systems, Inc., began researching defense systems and applying technology to solve defense-related problems eighteen years ago in graduate school at Georgia Tech, where he received a PhD in Electrical Engineering. For over sixteen years, Brent was employed by MIT Lincoln Laboratory (MIT/LL), a Federally Funded Research and Development Center (FFRDC) that applies advanced technology to problems of national security. During this tenure at MIT/LL, Brent rose from the ranks of the Technical Staff to the position of Assistant Head of the Air and Missile Defense Division where he oversaw over 450 people executing an annual research and development portfolio of approximately \$120M. During his career, Brent has demonstrated the ability to develop, organize, cultivate and lead teams as they tackle technical problems. He has substantial experience designing, planning and executing complex flight and ground tests and is an acknowledged Ballistic Missile Defense System and associated sensor technology subject matter expert.

To reserve your seat, RSVP to Phillip Henson at phillip.henson.gold@gmail.com by March 11th

- **Lunch is provided (No Cost)**
- Food will be served at 11:30
- The talk will begin at 11:45
